Table 1: rAUEC (↓) of complete physical fields, with means above sampling standard deviations ($n = 3$). Each backbone is normalized by its own matched Uniform. CPG uses $\beta = 1$. Best and second means within each backbone and dataset are bold and underlined; ties use displayed precision. N/A denotes pending experiments. Airfoil uses the fixed 110-case population with true $C_L > 0.02$. Sparse-application reconstruction.

Method	Darcy Field	Airfoil Field
Transolver3		
Uniform	N/A	1.0000 ± 0.0000
PI	N/A	0.6711 ± 0.0075
CPG	N/A	$\mathbf{0.5293}$ ± 0.0067
CA	N/A	$\underline{0.5632}$ ± 0.0073
LinearNO (point-temp)		
Uniform	N/A	1.0000 ± 0.0000
PI	N/A	0.6806 ± 0.0308
CPG	N/A	$\mathbf{0.5593}$ ± 0.0211
CA	N/A	$\underline{0.5900}$ ± 0.0259
